

ManyCam – quick start guide

1. Change the name of ManyCam in something else

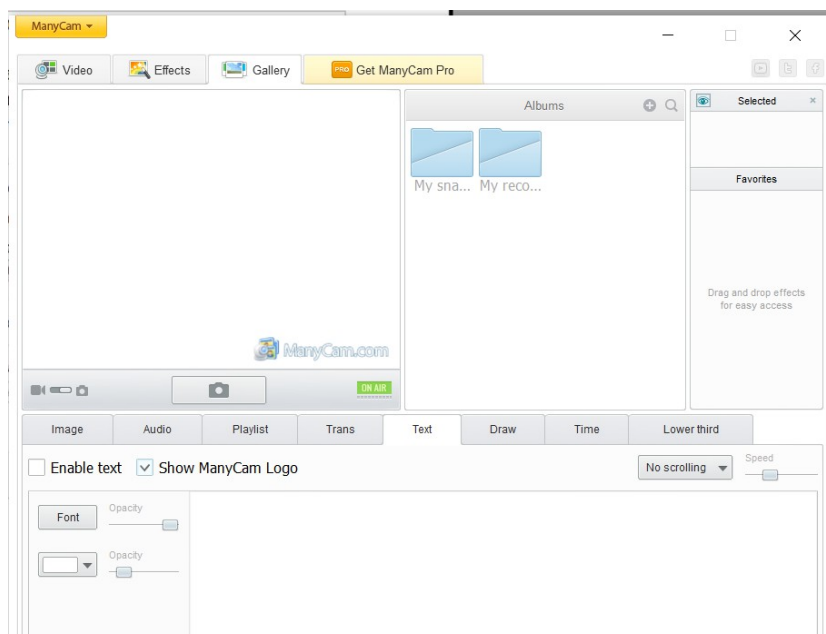

Go to ManyCam ---> Settings ---> (in the new window) General ---> Virtual Webcam friendly name (in this field write any Webcam name: LG Pro Webcam, Philips SPC110NC, HP HD 4310 Webcam ... any name you want)

By doing this first step, you will be able to use ManyCam on Omegle without being detected that you are using a simulated / fake webcam.

2. REMOVE ManyCam watermark

Go to "Text" tab ----> uncheck "Show ManyCam Logo"

3. How to play a video file

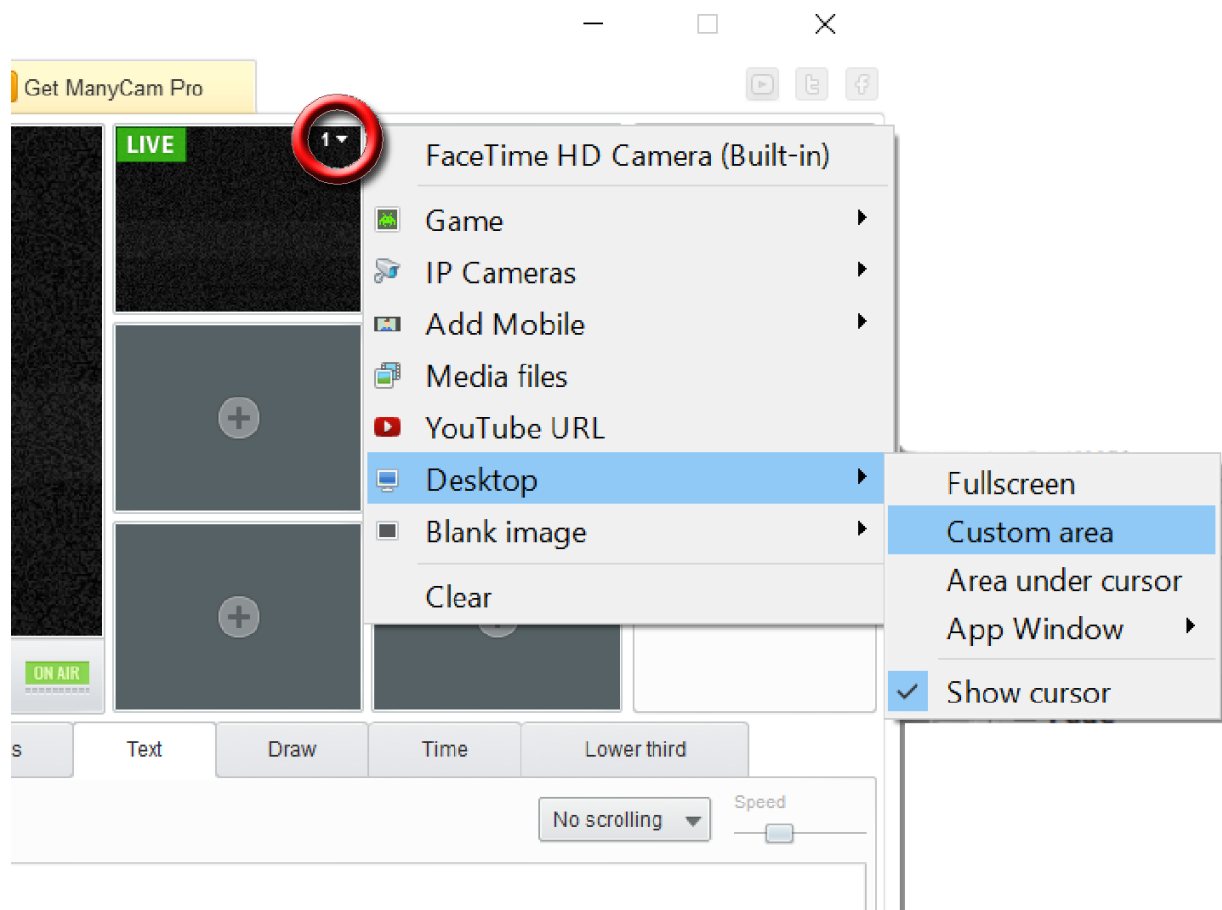

Go to "Playlist" tab ---> Click on "ADD" (add new source) ---> select "Media Files" ----- and browse for your video file.

This version of ManyCam can play MP4, WMV, AVI , WEBM, MPEG

4. How to stream a portion of your desktop screen

- Click on the little triangle located in upper-right-corner of the small screen
- From the dropdown menu, select "Desktop"
- From the new menu select "Custom Area"

Now by using your mouse you can drag the area that you want to stream.

This is ManyCam version 4.0.110.10
